

YAW ASSENSOH OPOKU

Operations & Business Analyst | Logistics Intelligence | Python · SQL · Tableau · Streamlit

+49 157 3806 5664 | EU Citizen | Hamburg, Germany

[Portfolio](#) | [Tableau Public](#) | [GitHub](#) | [LinkedIn](#)

PROFESSIONAL SUMMARY

Operations and business analyst with 5+ years of P&L ownership in logistics, having founded and scaled a Hamburg-based freight company with 6 employees and 20+ active clients across the DACH region. Strengthened analytical expertise through advanced training in Python, SQL, Tableau, Excel and Streamlit, supported by applied analytics projects, including 11 deployed – focused on forecasting, operational intelligence and business performance.

Delivered measurable operational outcomes including a 15% improvement in delivery efficiency and a 20% increase in repeat business. Blends operational leadership with data analytics to translate logistics and commercial data into actionable business decisions.

CORE COMPETENCIES

Analytics & Visualisation: Python (Pandas, Scikit-learn) | SQL | PostgreSQL | Tableau | Streamlit | Excel (Advanced) | Jupyter Notebook | Git / GitHub

Analytical Methods: Time-Series Forecasting (ARIMA/SARIMA) | Predictive Modelling | K-Means Clustering | A/B Testing | RFM Segmentation | Churn Analysis | KPI Design & Monitoring

Operations & Logistics: P&L Ownership | Route Optimization | Supply Chain Analytics | Demand Forecasting | Subcontractor Management | Fleet Coordination | Process Improvement | GDPR Compliance

Leadership & Business: Team leadership (6 direct employees) | Stakeholder communication | Contract negotiation | Client acquisition & retention | Commercial performance management

PROFESSIONAL EXPERIENCE

Founder & Operations Lead | **Black Excellence Transport** | Hamburg, Germany Jan 2020 – Mar 2025

Self-founded freight & logistics company | 6 employees | 20+ active client accounts | Six-figure annual revenue | Transitioned from operations to focus exclusively on analytics career

- Founded and scaled a freight operation from zero to six-figure annual revenue, managing 6 employees, a broad subcontractor network and full commercial responsibility across the DACH region.
- Built demand forecasting models in Python and SQL to anticipate volume and revenue trends, consistently exceeding monthly revenue targets by 10 – 15%.
- Designed and maintained real-time KPI dashboards in Tableau and Excel tracking delivery performance, cost efficiency and revenue across 20+ client accounts turning raw data into daily operational decisions.
- Performed RFM customer segmentation to identify high-value accounts and redesigned the retention approach, increasing repeat business by 20%.
- Optimised delivery routing and subcontractor dispatch through operational data analysis reduced dead mileage and improving overall delivery efficiency by 15%.
- Automated weekly and monthly reporting using Python and SQL eliminated manual effort, improved data consistency and freed capacity for strategic analysis.
- Managed all contract negotiations, cost modelling and partner relations direct commercial interface between clients, drivers and logistics partners.

Team Leader & Dispatcher | **MH Transport (DPD Hamburg)** | Hamburg, Germany Oct 2016 – Dec 2019

One of Germany's largest parcel networks — operational leadership of 30+ drivers across multiple Hamburg routes

- Led daily logistics operations and dispatch coordination for 30+ drivers, maintaining a 99% on-time delivery rate.
- Introduced a data-driven vehicle compliance and safety tracking system reducing maintenance-related downtime by approximately 25%.
- Produced weekly and monthly operational performance reports for senior management clear, decision-ready and used directly for resource allocation decisions.
- Real-time escalation management for route exceptions, driver incidents and client service failures.

Earlier Technical & Manufacturing Experience

Italy | 2004 – 2016

Busatto Legno · CNC Machine Programmer · Scorzè, Venice · 2008–2016 | River Lab srl · Machinist · Conegliano, Treviso · 2004–2008

- Precision manufacturing and regulated production environments process optimisation, quality control, calibration, and technical documentation across high-tolerance settings. Built the structured, detail-oriented analytical thinking that underpins all subsequent work.

ANALYTICS PORTFOLIO — BUSINESS & OPERATIONAL PROJECTS

All projects include live Streamlit dashboards or published Tableau workbooks, documented code on GitHub, and measurable business outcomes. [Full portfolio](#)

NYC Citi Bike — Supply Chain & Demand Optimisation | Python | Pandas | Forecasting | Streamlit

- Demand forecast model across 1,500+ stations with a 0.82 temperature-usage correlation, built a 4-week advance planning tool for proactive supply distribution. Dynamic pricing simulation identified potential revenue uplift opportunities of 20 – 25%.

US Housing Affordability — Market Intelligence Dashboard | Python | SQL | K-Means Clustering | SARIMA | Streamlit

- Live dashboard combining K-Means market clustering, SQL-based affordability risk scoring and a 36-month SARIMA price forecast across five US cities built as an interactive Streamlit dashboard supporting affordability risk analysis.

Influenza Staffing Forecast — Resource Planning Model | Python | ARIMA | Scikit-learn | Tableau

- ARIMA forecasting model achieving 89% accuracy for 4-week patient admission windows enabled optimised staffing schedules and reduced projected overtime costs by 23%.

Financial Markets Intelligence Platform | Python | Pandas | Streamlit | Quantitative Analysis

- Quantitative stock analysis platform with risk-adjusted portfolio optimisation and RSI momentum signals outperformed SPY benchmark performance in selected historical backtesting periods.

Customer Churn Prediction Model | Python | Scikit-learn | SQL

- Binary classification model identifying at-risk subscription customers with 85% prediction accuracy.

Instacart — Market Basket & Customer Segmentation | Python | Pandas | NumPy

- Analysed 3M+ transactional rows using RFM segmentation and product association analysis identified 12 high-probability product pairs associated with a projected 15% increase in average order. Value through bundling strategies.

Fleet Operations Intelligence Dashboard [In Development] | Python | SQL | Tableau | Streamlit

- Operational analytics dashboard built from real freight logistics experience. Deployment expected Q3 2026.

EDUCATION & CERTIFICATIONS

Data Analytics Certification (Full-Time, 12 months) | CareerFoundry

Jan 2025 – Dec 2025

- Structured curriculum: Python, SQL, statistics, machine learning, Tableau and applied project work.

High School Diploma (Abitur equivalent) | CPIA Giuseppe Verdi | Mogliano Veneto, Italy

2009 – 2012
